Experience

Software Engineer

Accenture

July 2024 – Present

Bengaluru, Karnataka

Developed scalable Spring Boot applications following the Controller–Service–Repository architecture, ensuring clean separation of concerns and maintainable backend services.

Designed and developed secure REST APIs by implementing JWT-based authentication, OAuth 2.0 authorization, and role-based access control (RBAC).

Designed and optimized MySQL database schemas using indexing and query optimization techniques to improve backend data access and API performance.

Integrated API Gateway request and schema validation to enforce input integrity and prevent invalid backend traffic.

Containerized Spring Boot applications using Docker and automated build and deployment workflows through CI/CD.

Collaborated with DevOps teams to streamline application deployments and support production release activities.

Integrated Power BI REST APIs into backend services to implement selective dataset refresh, helping reduce unnecessary dataset refresh operations by an estimated 70% through selective refresh of only impacted datasets after data changes.

Developed Python automation scripts for Power BI dataset refresh and operational monitoring tasks.

Developed Agentic AI applications using Python and LangChain by integrating existing Spring Boot REST APIs, enabling LLM-powered backend workflows and business process automation.

Project

E-Commerce Backend Application | Java, Spring Boot, MySQL, Docker, AWS

[Project link\(GitHub\)](#)

- Built a production-ready e-commerce backend using Java, Spring Boot, Spring Security, JPA, and MySQL with JWT-based authentication and role-based authorization.
- Designed and implemented product, category, cart, order, inventory, and admin management modules with an optimized relational database schema.
- Developed secure REST APIs with request validation, transactional order processing, inventory validation, and stock deduction to maintain data consistency.
- Implemented cart-to-order checkout workflow with order persistence and transaction management for reliable order processing.
- Documented REST APIs using Swagger/OpenAPI and containerized backend services using Docker for simplified deployment.
- Deployed the application on AWS and followed modular backend design principles to support scalability and maintainability.

Technical Proficiencies

Languages: Java, Python, SQL

Technologies: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Django, FastAPI, REST APIs, JWT, LangChain, Agentic AI

Databases Cloud: MySQL, PostgreSQL, MongoDB, AWS, Docker, Kubernetes

Tools Concepts: Git, Maven, Postman, Swagger/OpenAPI, CI/CD, RBAC, Microservices, Transaction Management, Data Structures and Algorithms

Education

Madanapalle Institute of Technology and Science

B.Tech in Electrical and Electronics Engineering

CGPA: 9.3/10

Madanapalle, Andhra Pradesh

Achievements & Contributions

- Received ACE Award recognising consistent performance, initiative, and contribution to team success.
- Solved 450+ Data Structures and Algorithms problems across LeetCode and coding platforms, strengthening problem-solving skills in arrays, strings, trees, graphs, dynamic programming, and greedy algorithms.
- Served as an NSS Volunteer for two years, contributing to community outreach programs, social awareness campaigns, and team-driven initiatives.
- Participated in Accenture's Buddy Program, mentoring freshers and assisting them in understanding project expectations and choosing suitable technology learning paths.
